

Care & Clinical

Product Specifications

Everything you need to run a more efficient home, so you and your team can focus on delivering outstanding person centred care

Care & Clinical has been designed to assist you and your team in evidencing the quality care you deliver to your residents, and helps businesses manage risk and support compliance regulation mandated by governing bodies.

Our software is an end to end solution that allows you to record and view the residents information at the point of care as well as produce the necessary reports that ensure you are able to evidence quality care delivery and regulatory compliance.

It is simple to create and maintain highly personalised documentation such as assessment forms, charts, progress notes, and care plans without investing too much time.

Daily Notes

Ensure that all social interactions, signs of well-being, signs of ill-being and any other details you deem as important are captured accurately and quickly.

Care Planning

Automate the creation and refining of your care plans through Assessment Forms. The Care Planning capability speeds up the overall management of all care planning processes, whilst maintaining the quality and personalisation you require to differentiate yourselves in the market.

Assessment Forms

Don't force yourselves down a path of hardcoded assessment form templates that cannot be edited, our intuitive Assessment Form designer allows you to build and refine your own templates which means that staff adoption becomes far simpler and you don't

have to lose out on the years of expertise and brand you have invested in your existing tools. Don't have the time to create your own forms? Don't worry, we have that covered to via our existing suite of 50+ templates.

Monitoring Charts

Record and keep a handle on all key monitoring observations such as food + fluid intake, repositionings, hygiene + oral care, weights and many more ... and speed up the process of recording all of that information using the mobile app.

Management Reporting

Gain greater transparency across your organisation with the easy to use reporting tools. Lock down access by facility, region or national views to ensure that people only see the information they need to.

Care & Clinical Key Features
