

iCareMeds

Product Specifications

A safer, accurate and more efficient way to manage your residents' medication.

Reduce the risk of medication errors by confirming that the correct medications have been given to the correct resident at the correct time. iCareMeds provides a safer and more efficient way of managing the key medication processes you have adopted across your organisation inclusive of: check in, administration, stock audit, disposal and re-ordering.

iCareMeds is supported by a competency based eLearning system ensuring your staff have immediate and continued access to resources, allowing them to develop and practice the skills needed to confidently use every aspect of iCareMeds.

iCareMeds also integrates with Care & Clinical. The pairing of clinical and medication data provides a more holistic view of a resident's wellbeing, allowing you to make better informed decisions about their care.

eMar

Electronic, real time recording to ensure accuracy of completed administrations and alerting for items that are late.

PRN Management

Avoid adverse resident outcomes with safe and effective management of PRNs.

Automated Alerts & Warnings

Ensure that all medications are administered within a safe tolerance or not too close together with automated alerts and warnings.

Pharmacy Integration

Ensure that data entry is kept to a minimum and data integrity is high, with a direct interface into your pharmacy.

Audit Reports

Stay on top of how your organisation is performing with our built-in dashboards and extensive reporting suite.

Stock Inventory Management

Keep an accurate record of what inventory you are currently 'carrying' and schedule regular stock checks to ensure accuracy.

Offline Capability

Our MedAssure[®] technology means that even during internet outages or whilst recording administrations in poor internet areas, you can continue to record all medication administrations.

eLearning & Competency Management

Our bespoke eLearning content has been designed to ensure the team have a thorough understanding of how the system helps them complete their daily tasks.
